General information

Introduction to the Bike BREX DM

The Bike BREX data module has primarily been developed to

- serve as an example of how a BREX data module is meant to be used
- to control and guide the continuous development of the Bike data set

The Bike BREX will be subject of continuous enhancements to ensure that each new specification issue is appropriately represented in the BREX module.

Description

1 Physical description of a bicycle

A bicycle (refer to [Fig 1](#)) is a frame and a number of movable components with mechanical parts that are completely open. There are no covers or sheet metal panels that prevent access to the mechanical parts. Thus, you can disassemble the different components of a bicycle (refer to [Fig 1 \[0\]](#)) to do:

- an inspection
- a maintenance task
- a repair task

The parts that you can immediately identify on a bicycle are given in [Table 2](#).

Description

1 Functional description of a bicycle

Below is a list of the different bicycle components and a functional description of them.

Frame	The frame is the skeleton of the bicycle. Refer to S1000DBIKE-AAA-DA3-00-00-00AA-041A-A for a functional description of the frame system.
Wheel	The wheel is the point of contact between the bicycle and the road for the bicycle to have movement. Refer to S1000DBIKE-AAA-DA0-00-00-00AA-041A-A for a functional description of the wheel.

Applicable to: Mountain bicycle
and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-042A-A

Spokes	The spokes are thick wires with tension applied that connect the hub to the rim. You can adjust the tension with the nipple on the rim side.
Hub	The hub attaches to the center of the wheel where the axle and the bearings are.
Metal rim	The metal rim is a metal ring that has a U-shaped cross section to hold the spokes on the inner side and the tire on the outer side.
Seat	The seat, which is also known as the "saddle", is used as the support platform for the person to sit on the bicycle.
Seat post	The seat post is used as a support post for the seat and to change the height of the seat for the rider.
Handle bar	The handle bar is a horizontal bar with handles on each end. The handle bar is a steering mechanism that the rider uses to change the direction of the bicycle. The brake levers are also on the handle bar. Refer to S1000DBIKE-AAA-DA2-20-00-00AA-720A-A for information on how to install the handle bar. Refer to S1000DBIKE-AAA-DA2-20-00-00AA-520A-A for information on removing the handlebar.
Handle bar stem	The handle bar stem (the stem) attaches the handle bar to the steering tube. Refer to S1000DBIKE-AAA-DA2-10-00-00AA-720A-A for information on how to install a stem. Refer to S1000DBIKE-AAA-DA2-10-00-00AA-520A-A for information on how to remove the stem.
Brake levers	When you operate the brake lever, the brake pads move against the wheel to decrease the speed. The brake lever on the left side operates the front brake. The brake lever on the right side operates the rear brake.
Brakes	When you operate the brakes, the brake pad moves against the wheel to decrease the speed of the bicycle. Refer to S1000DBIKE-AAA-DA1-00-00-00AA-041A-A for a description of the braking system.
Shifters	The shifters are the mechanisms that you use to change the gears on the bicycle. There are 7 different types of shifters that have been developed over the years, but they all have the same functionality. When you operate the shifters, they pull the control cable to move the derailleur towards a larger diameter chain ring. The shifters can also loosen the cable to let the derailleur move towards a smaller diameter chain ring. Refer to S1000DBIKE-AAA-DA5-30-00-00AA-041A-A for a functional description of the shifters.
Crank	The crank moves the power to the chain rings when the pedals operate.
Pedals	The pedals move the force of movement from the feet to the cranks.

Applicable to: Mountain bicycle
and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-042A-A

Chain	The chain moves the power from the chain rings to the cogs on the freewheel. Refer to S1000DBIKE-AAA-DA4-10-00-00AA-251B-A for the procedure on how to clean the chain.
Gears	<p>The gears have different mechanisms that function together to change the speed of the bicycle. These mechanisms include:</p> <ul style="list-style-type: none">- the sprockets- the chain- the derailleur <p>Refer to S1000DBIKE-AAA-DA5-00-00-00AA-041A-A for a functional description of the gear system.</p>
Chain rings	The chain rings (also known as the "chain wheel") pull on the chain when the cranks turn.
Derailleur	A derailleur moves the chain from one sprocket to another to change the gears. There are two different types of derailleur, the front and the rear. The highest ratio (highest gear) is when the chain is on the largest sprocket on the front and the smallest at the rear. To get the lowest gear, the smallest sprocket is at the front and the largest at the rear. Refer to S1000DBIKE-AAA-DA5-10-00-00AA-041A-A for a functional description of the derailleur system.

Crew

1 Introduction

Data about the bicycle and its control system is given in this document. This data will help you operate the bicycle.

2

2.1 Controls

Data about the controls that follow is given in this document:

- [Para 2.2](#)
- [Para 2.3](#)
- [Para 2.4](#)
- [Para 2.5](#)

2.2 Steering

The handlebars are used to steer the bike. They are at the front of the bicycle. You hold one of the handlebar grips with each hand and move the handle bar to change the direction of the bike.

Applicable to: Mountain bicycle
and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-043A-A

2.3 Shifters

The gears control the ratio of pedal rotation to wheel rotation. You can change this with the shifters [S1000DBIKE-AAA-DA5-30-00-00AA-041A-A](#) . The shifters are on the handlebar.

A description of the two [Table 2](#) follows.

Table 2 shifter correlation (Continued)

Shifter Location	Affected Gears
Left	The buttons on the left shifter changes the gears on the front derailleur.
Right	The buttons on the right shifter changes the gears on the rear derailleur.

2.4 Brakes

You can decrease the speed of the bike with the brakes. You operate the brakes with the brake levers on the handlebar.

A description of the [Table 3](#) follows.

Table 3 brake lever correlation (Continued)

Brake Lever Location	Affected Brake
Left	This lever operates the front brake.
Right	This lever operates the rear brake.

2.5 Pedals

The ci-0004 are at the bottom of the seat tube. You operate the ci-0004 to move the bicycle forward.

Procedure

- 1 Examine the condition of the brakes.
 - 1.1 Open the brake quick release.
 - 1.2 Examine the condition and the thickness of the brake pads.
 - 1.2.1 Make sure that there is a large quantity of rubber left.
 - 1.2.2 Make sure that the pad is not too hard.
 - 1.3 Clean all the unwanted material.
- 2 Do an inspection of the installation of the brakes.
 - 2.1 Check the hydraulic brake system function.

-
- Make sure that the pads are correctly installed in the center of the inner diameter of the brake surface.
- 3 Do a check of the tire pressure.
- 3.1 Do a check of the tire pressure with the [Tire pressure gauge](#) .
- 3.2 Compare the value you read with the recommended pressure that is shown into the sidewall of the tire.
- 3.3 Add the necessary air.
- 4 Examine the condition of the wheels.
- 4.1 Examine the rims for bulges and dents.
- 4.2 Examine for splits at the seam where an extruded rim is bonded.
- 5 Do a check of the headset bearings.
- 5.1 Straddle the bicycle.
- Apply the front brakes and push the handle bars forward.
- 5.2 Make sure that the headset bearings are tight.
- 6 Do the checks on the chain.
- 6.1 Visually examine the chain.
- If the chain is too dirty, clean it as specified in the clean chain task (refer to [S1000DBIKE-AAA-DA4-10-00-00AA-251B-A](#)).
- 6.1.1 Visually examine the chain for links that are frozen or that do not move easily.
- 6.1.2 Apply the necessary [General lubricant](#) .
- 6.2 Do a check of the chain to make sure that it is tight.
- 6.2.1 Make sure that the play of the chain is not too much.
- 6.2.1.1 Move the chain on the largest chain ring.
- 6.2.1.2 Try to pull the chain away from the front of the chain ring.
- Make sure that the chain is not loose. Tighten the chain if, when you pull it away from the chain ring, you can see a full tooth.
- 6.2.2 Tighten the chain with the Allen wrench from the [Specialist toolset](#).

Applicable to: Mountain bicycle Brook trekker Mk9

WARNING

Do not get **BoeBus DeLux Detergent No.6** into your eyes. If it gets into your eyes, wash them immediately in clean warm water.

CAUTION

Do not use a **Water hose** that has high pressure. A water hose that has high pressure can cause some parts to become loose or full of water.

CAUTION

Do not point the hose directly at the hub or at the bottom bracket bearings. This can cause damage to the parts.

Applicable to: Mountain bicycle Brook trekker Mk9

CAUTION

Apply **BoeBus DeLux Detergent No.6** in accordance with the instruction on the container. The substance may cause damage to the Bike paint if it is not applied correctly.

Procedure

- 1 Clean the bicycle with water to remove all dirt. Refer to [Fig 1](#).

Procedure

- 1 Remove the rear wheel. (Refer to [S1000DBIKE-AAA-DA0-20-00-00AA-520A-A](#))

Applicable to: Mountain bicycle
and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-663A-A

-
- 2 Make sure that there is no air in the tube.
 - 2.1 Loosen the cap on the valve stem.
 - 2.2 Push the valve stem core down to bleed all the air.
 - 3 Use a [Tire lever](#) to move the tire bead out of its seat. Lift the tire bead above the lip of the rim.

ICN-C0419-S1000D0368-001-01

Fig 1 Unseating the tire with a tire lever

-
- 4 Remove the tube.
 - 5 Inflate (not fully) the tube with the [Foot pump](#). Examine the tube for leaks.
 - 6 If you find a leak, identify it with a circle made with a [Marker pen](#).

-
- 7 Release most of the air.
 - 8 Use a piece of sandpaper from the [Tube patch kit](#) and make the area on and around the hole rough. This will help the patch bond correctly.

ICN-C0419-S1000D0376-001-01

Fig 3 Sanding the application area

-
- 9 Apply a thin layer of glue from the patch kit on and around the hole. Make sure that the area with the glue is larger than the patch.

ICN-C0419-S1000D0377-001-01

Fig 4 Apply glue to application area

-
- 10 Let the glue dry for five minutes until it becomes tacky and dim.
 - 11 Remove the rear foil from the patch (that is a part of the patch kit) and push the patch in its position.
 - 12 Push with your thumbs from the center of the patch to the outer part of the applied area.

ICN-C0419-S1000D0378-001-01

Fig 5 Apply pressure to tube

-
- 13 Remove the thin cover from the patch.
 - 14 Put a very thin layer of talcum powder on and around the patch.
 - 15 Inflate (not fully) the repaired tube with the foot pump.
 - 16 Start at the valve stem and install the tube again between the tire and the rim.
 - 17 Push the valve stem through the hole in the rim.
 - 18 Make sure that the valve stem is straight.
 - 19 Install the remaining of the tire.

Description

1 The bicycle wheel

The wheel (refer to [Fig 1](#)) of a bicycle is a complex structure. The wheel assembly has these parts:

- the tire
- the tube
- the spokes
- the spoke nipples
- the valve
- the hub

On their own, the individual components are not very strong. But, when they are installed together, the components make the complete wheel (refer to [Fig 1](#)). The complete wheel is resistant to almost any type of heavy loads and operation.

and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-DA0-00-00-00AA-041A-A

1.1 Spokes

The spokes go out from the hub and go across and below each other. The spoke nipples attach the spokes to the rim with the threads on the end of the spokes. You can use the spoke nipples to adjust the tension of the spokes. The tension on each of the spokes must be equal.

1.2 Wheel rim

The rim (refer to [Fig 2](#)) of the wheel has a lining of rim tape. This tape protects the tube from damage that the rough edges on the spoke nipples can cause.

ICN-C0419-S1000D0366-001-01

Fig 2 The tire and rim

Applicable to: Mountain bicycle
and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-DA0-00-00-00AA-041A-A

1.3 Tube and tire

The tube and the tire install on the rim. The sidewalls of the tire have markings on them. These which are used to indicate the correct direction of rotation. The markings also make sure the tire installs on the rim and that the directional arrows points in the correct direction. You install the tube into the tire before you inflate it. The tube has a valve (refer to [Fig 3](#)) which you put through the hole in the rim. This valve (refer to [Fig 3](#)) is used to inflate the tube and the tire to the correct pressure. A dust cap installs on the valve (refer to [Fig 3](#)) to prevent damage that dust and debris can cause.

Description

1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to [Para 1.1](#)).

1.1 Cantilever brake

The brake system (refer to [Fig 1](#)) has these primary components:

- the brake lever (refer to [Para 1.3](#))
- the brake cable
- the brake arm
- the brake clamp (also known as callipers)
- the brake pads (refer to [Para 1.2](#))

and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

1.2 Brake pads

There are four brake pads (refer to [Fig 2](#)) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

and (Mountain storm Mk1 or
Brook trekker Mk9)

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

1.3 Brake lever

The brake levers (refer to [Fig 3](#)) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

The left brake lever holds the brake pads on the front wheel and the right brake pads hold the brakes on the rear wheel.

S1000DBIKE-AAA-DA2-30-00-00AA-041A-A	Headset - Description of how it is made

Description

1 Steering

The steering on the bike is what enables the bike to manoeuvre in a given direction during travel. The steering system on the bike is made of three parts, they are:

[Para 1.1](#) The handlebar

[Para 1.2](#) The headset

[Para 1.3](#) The stem

1.1 Handlebar

This consists of a horizontal bar attached to the stem with handgrips at the end. Brake levers and shifters are also attached to this bar although they do not have any part in the steering mechanism. The handlebars manoeuvrability is a sideways swivelling action. The handlebars themselves do not provide this swivelling, the headset (also known as the steering tube) is the mechanism that enables the handlebars to swivel.

1.2 Headset

This mechanism is situated in front of the frame and connects the front fork to the stem and handlebars. The headset allows the handlebars to swivel left and right for steering purposes.

For a full description of the headset, refer to [S1000DBIKE-AAA-DA2-30-00-00AA-041A-A](#).

1.3 Stem

The stem is a piece that attaches the handlebar to the steering tube. Basically the stem is just a threaded stem bolt situated inside the steerer tube and is what attaches the handlebars to the headset.

Description

1 Headset

The headset (refer to [Fig 1](#)) is a pair of bearings on the two ends of the head tube of the frame. These bearings permit the fork to turn rearward and forward (for example, to let the rider turn the handlebars for the steering).

The headset (refer to [Fig 1](#)) includes the parts that follow:

- The bearing races that push into the head tube
- a bearing race that pushes on the fork steerer tube
- an adjustable upper race
- two sets of ball bearings

A headset has cups that are pushed into the head tube and a ring on the fork. All three must be fully parallel. It is usually necessary to remove rough paint to get all three fully parallel.

The upper race installs onto the steerer tube with a thread. A locknut is used to safety the upper race.

A clamp bolt holds the stem to the steerer tube.

The fourth remaining bearing race is part of a nut that installs on the threaded top end of the fork. This is done after you install it in the head tube. It is sometimes necessary for some headsets to have more thread at the top of the head tube. If the fork is too long, the spacer rings can be installed. If it is too short, there is a limit to the number of headsets you can use.

For an illustration of the parts of the headset (refer to [Fig 1](#)).

Description

1 The bicycle frame

The frame is the skeleton, the primary part of your bicycle. Its structure makes the bicycle resistant to large forces.

The initial frames (refer to [Fig 1](#)) were tubes of aluminum or steel welded together.

Subsequent frames (refer to Fig 2) can be made out of a wide variety of materials, including aluminium, titanium, or chrome moly.

ICN-C0419-S1000D0393-001-01

Fig 2 Frame

Other Frames are different and can also be of different materials (for example, titanium or chrome moly). Some bicycle frames are of carbon fiber. To get this material, it is necessary to put sheets of carbon fiber cloth on foam forms and epoxy them in position. This procedure gives a very light, strong structure that can have different shapes.

The frame includes the parts that follow:

- the top tube (the higher bar of the bicycle frame)
- the down tube (the section of the frame that extends from the stem to the bottom bracket)
- the head tube (the part of the frame that the fork steerer tube goes through)
- the seat tube (the vertical part of the frame that is the rear of the front triangle and that is between the bottom bracket and the top tube)
- the seat stay (the tube that includes the distance between the seat tube and the rear dropouts)
- the chain stay (the tube that is the bottom part of the rear triangle)

1 Drive train

The drive train is the group of components that are necessary for the operation of the bicycle. The drive train is the primary system for the movement of the bicycle. A typical drive train has the chain wheels, the chain, the pedals and the saddle.

Since the drive train has many components, it is necessary to do a regular maintenance. The drive train maintenance is easy and the users can disassemble and assemble each part of the drive train. Because of this, when one part is defective, it is possible to remove and replace it with a new one.

3 Check lubricated parts

- 3.1 Do a check of the rear wheel rim and clean the unwanted lubricant if necessary.
- 3.2 Do a check of the chain to make sure that each link is lubricated. If there are links that do not move easily or have become frozen, lubricate the chain again (refer to [Step 2](#)).
- 3.3 Do a check of the remaining lubricated parts and clean the unwanted lubricant with a [Clean dry cloth](#).

Procedure

- 1 Inspect the chain.
Do the inspection of the chain as given in the pre-ride checks (refer to [S1000DBIKE-AAA-D00-00-00AA-121A-A](#)).
- 2 Prepare the cleaning area.
 - 2.1 Put the [Floor covering](#) on a satisfactory floor area.
 - 2.2 Put the bicycle on the floor covering.
- 3 Clean debris from the chain.
 - 3.1 Use the [Stiff bristle brush](#) and loosen as much unwanted material as possible.
 - 3.2 Make sure that you remove all the unwanted material from the chain.
- 4 Clean the chain.
 - 4.1 Open the [Chain cleaning tool](#) and fill with the [Chain cleaning fluid](#).
 - 4.2 Move the chain to the middle chainring and the middle sprocket at the rear.
 - 4.3 Put the chain in the chain guides of the chain cleaning tool and lock the tool on the chain.
 - 4.4 Hold the tool with the left hand and slowly turn the rearwards with the right hand.
 - 4.5 Press the button on the cleaning tool to make sure that cleaning fluid flows until the tool is empty.
 - 4.6 If necessary, remove the unwanted chain cleaning fluid.

Description

1 Gears

The gears include the mechanism, the hubs and the shifters.

The description of the mechanisms is given in [S1000DBIKE-AAA-DA5-10-00-00AA-041A-A](#)

The description of the shifters is given in [S1000DBIKE-AAA-DA5-30-00-00AA-041A-A](#)

The bicycles of these days can have 27 gears or more. The mountain bikes use a set that includes:

- Three socket sprockets of different dimension on the front
- Nine socket sprockets of different dimensions at the rear

This set gives the gear ratios.

The shifters installed on the handlebars change the gears and operate the mechanisms (also known as derailleurs). These derailleurs are cable-actuated mechanisms. They move the chain from the different sprockets.

The hub is the center of the wheel and contains the axle and bearings.

The gears let the rider crank at the pedals at a constant movement on slopes of different angles.

Description

1 Derailleur

There are two different types of derailleur, the front and the rear.

1.1 Front derailleur

The front derailleur (refer to [Fig 1](#)) contains two types of screws to keep the movement of the derailleur to a minimum. These screws are:

- the stop screw low-gear
- the stop screw high-gear

The function of these screws is to prevent the rider from over shifting . If this occurs, the chain will go out of the chain wheel.

S1000DBIKE-AAA-DA5-10-00-00AA-041A-A

The derailleur is installed on the bicycle seat tube with a clamp and is parallel to the three front sprockets.

The shift cable is connected between the shifters on the handle bars and the cable clamp bolt on the front derailleur. This operates the derailleur. On the sprockets there is an inner and outer cage. The clamp attaches the cage.

1.2 Rear derailleur

The rear derailleur (refer to [Fig 2](#)) section contains the sprockets for the different gear changes. When the cable clamp bolt is tight, it holds the shift cable in its position. A screwed bolt holds the tension wheel.

S1000DBIKE-AAA-DA5-10-00-00AA-041A-A

The derailleur mounting bolt connects the derailleur to the frame. When the user attaches this bolt, this makes sure that the cage plates are parallel with the chain rings.

The guide wheel has the function to move the chain with the derailleur. It moves the chain from one sprocket to the other. The guide wheel must not move on its axis. If this occurs, there will be wear on the wheel. The position of the guide wheel is below the largest sprocket.

Description

1 Shifters

The thumb shifter is a usual type in modern bicycles. It is possible to adjust this type of shifter for operation in the index position or in the friction position. The differences between the two are:

- The index shifters change the gears with a click of a lever.
- The friction shifters hold the derailleur in its position by friction.

The thumb shifters (refer to [Fig 1](#)) are held on the bicycle with a screw. The paragraph that follows gives a description of a thumb shifter.

2 How a thumb shifter is made up

A wing nut (refer to [Fig 2](#)) from the top of the lever holds the thumb shifter. The lever is on top of the mount and the mount is on the handle bar with a nut. To remove the mount, it is necessary to loosen the nut of two turns (refer to [Fig 3](#)), then the mount can move from the handle bar from the top of the lever. The lever sits on top of the mount and the mount is fixed into place on the handle bar by a nut.

On modern models of this shifter, there is a clamp bolt that holds the shifter in its position (refer to [Fig 4](#)). The user can loosen the clamp bolt with an applicable tool. This lets the shifter release the handlebar.

Description

1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to [Para 1.1](#)).

1.1 Cantilever brake

The brake system (refer to [Fig 1](#)) has these primary components:

- the brake lever (refer to [Para 1.3](#))
- the brake cable
- the brake arm
- the brake clamp (also known as callipers)
- the brake pads (refer to [Para 1.2](#))

BRAKE-AAA-DA1-00-00-00AA-041A-A

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

1.2 Brake pads

There are four brake pads (refer to [Fig 2](#)) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

BRAKE-AAA-DA1-00-00-00AA-041A-A

1.3 Brake lever

The brake levers (refer to [Fig 3](#)) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

Description

1 Lighting system

The illustration that follows (see [Fig 1](#)) shows the lighting system of the bicycle.

The lighting system is equipped with special high beam lighting. Do not use special high beam lighting when bicycling on roads during winter months.

The lighting system is faulty and will be replaced by 2013-03-15.
